

Super Overwrapper

**Fully Automatic Servo Overwrapping Machine
For Media, Cosmetics, Pharmaceuticals and Box Overwrapping**

The Super Overwrapper is a universal, fully automatic, tuck-and-fold style overwrapping machine. The system uses heat sealable film to wrap products tightly in the preferred back-seal configuration. A wide range of product sizes can be wrapped, requiring only a few mechanical guides to be switched out, taking as little as 10 minutes to accomplish.

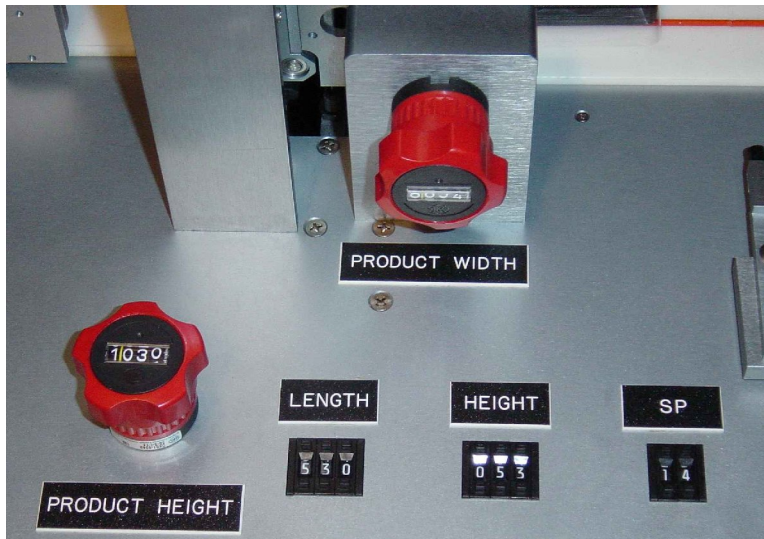

An industrial microprocessor controls timing of all subsystems, thus eliminating the need for traditional mechanical cams and linkages. The electronically based design offers superior performance, unparalleled ease of use, and minimal maintenance. An innovative film cutter utilizes a single bladed knife, hence ensuring extended service life, and simplified eventual replacement. Standalone operation is superb, yet a versatile interface allows the system to interface with other machines in an extended automated packaging line. A data link is available to record all operating parameters at a remote computer for management, monitoring, or quality assurance purposes.

Super Overwrapper for Media, Cosmetics and Box Overwrapping

DMA Super Overwrapper Specifications

- Product Sizes: Quick Change CD, DVD, VHS, Pharmaceuticals
Cosmetics and General Box Overwrapping
- Speed: 70 Parts Per Minute (Application Dependant)
- Size Changeover: Complete Product Changeover in 10 Minutes
- Machine Size: 33" Wide, x 53" Long, x 38" High
- Connectivity: Electric, Regular Outlet 110 or 220 V
Pneumatic, 90 Psi 5 CFM
- Interface: Comprehensive; Supports Multiple Standards
- Product Entry: Conveyor or Optional Hopper
- Product Exit: Conveyor Out-Feed
- Film Stock: 12" Diameter Rolls on 3" Cores
- Print Mark Registering: Available Option
- Tear Tape: Available Option
- Output Restacker: Available
- European CE Compliance: Standard
